

MEDICAL TESTERS / Defib Surge 380

MegaPulse Defib Surge 380

↘ Per prEN45502-2-2:2006 Sec. 20 - External Defib Protection Test 1*

↘ FEATURES

A Compliance West Surge Tester. That means it outputs a guaranteed waveform but won't break the bank. We don't believe in frills that never get used, but we do believe in providing a user-friendly, reliable tester that outputs the waveform it is supposed to, time after time.

The Defib Surge 380 outputs the pulse shown in prEN45502-2-2 Fig. 107; with a T_p of 1.5 - 2.5ms; and a T_{w50} of 3 to 5.5ms when fired into the resistor network shown in Fig. 110. For tester protection, Fig. 110's R7 and R1 are supplied internally; the user must attach the remaining resistors outside the tester. In accordance with the Standard, the MegaPulse Defib Surge 380 can recharge and fire the next pulse within 20 seconds.

Built in the USA. Serviced in the USA by the guys who designed and built it. Email and phone support free for life. Reasonable repair and calibration charges. If you can't get it fixed, why buy it?

*representative model; outputs not as pictured

The blue box that tests. And tests.
