## MegaPulse 1.2x50-8KV PV

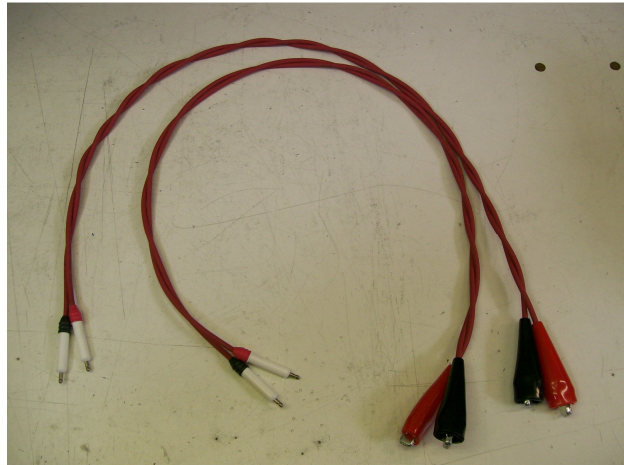

### Capacitor Compensated output Option.

This option allows you to obtain the waveshape in accordance with the tolerances of IEC 1180 when used with a panel having capacitance between 10 and 180nF. Use the following considerations for the connection of the megapulse and the equipment under test.

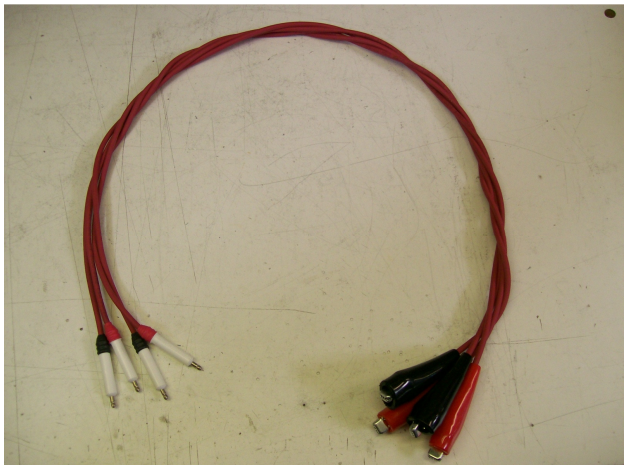

### Test cables

Entangles the two pairs of test leads as shown in the figures 1 and 2.

1

2

### Connection.

Connect the two pairs of test leads to the megapulse 1.2x50-8 KV PV.
