

The blue box that tests. And tests.

Compliance West USA Capabilities

Overview

We are an engineering house specializing in high voltage and surge testing. We have standard products for product safety testing and surge testing, which are described below. We also offer a line of 4" LED displays which receive input from 4-20mA loops and from thermocouples. Finally we offer the only production test solution for telephone overvoltage testing to GR-1089.

We offer custom capabilities beyond standard product for specialized requirements. Our expertise in surge testing and high voltage testing can be extended to add data acquisition; computerized operation and automated test solutions. In the surge test area, our expertise extends to 12kV/3kA. In high voltage, we can provide solutions to 10kV and currents to 1A. In high current ground bond test applications, we have built 300A testers.

100% of our production is designed and manufactured in the USA.

Standard Products

Production and research hipots are available from stock. Our HT-2000, HT-2800 and HT-3000 are designed to conduct the UL/CSA hipot/ground continuity test. These testers can also be used with our GF-30ac to conduct the TUV/NEMKO (European safety agency) Hipot/Ground Bond test. Surge Testers are available for selected tests in IEC 950, IEC 65 and IEC 60601-1 within 2 weeks ARO. Custom surge testers are available with varying deliveries.

Custom Products

Our engineering staff is versed in surge testing and hipot testing and we can provide a quotation for custom requirements upon request. Customers include General Electric, Guidant/Boston Scientific, St. Jude Medical/Pacesetter, TII and Tyco. We can provide a quotation and delivery schedule for a custom tester.

Information Contact

Please give Jeff Lind a call at (858) 481-6454 x 191 for further information about our products and capabilities.
